

Xavier — App Store screenshots

6.9" set · 1320 × 2868 px · shot 1 is a real capture; 2–6 to grab on your device to match.

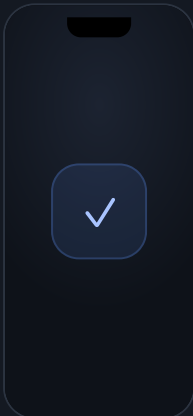

01 REAL CAPTURE

Just say it.

Tell Xavier what you spent — parsed right on your iPhone.

Captured — Assistant home. Upload-ready as-is.

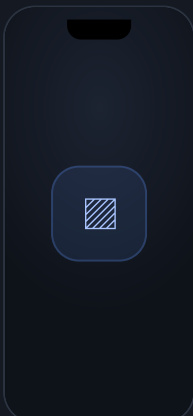

02 TO CAPTURE

Confirm before it saves.

Every entry shows a card first. Nothing is logged without your OK.

On device: type "lunch 12.50 at Subway" → screenshot the confirmation card.

03 TO CAPTURE

See where it goes.

Monthly income vs. expense, across all your accounts.

On device: Dashboard tab, with a few weeks of transactions entered.

04

TO CAPTURE

Private by design.

No account, no cloud. Encrypted on device. Optional Face ID.

On device: Settings, showing the Face ID and privacy rows.

05

TO CAPTURE

Your data, your backup.

Back up to your own iCloud. Restore with a tap.

On device: Settings → Backups.

06

TO CAPTURE

OPTIONAL

At a glance.

A Home Screen widget that hides itself when your phone is locked.

Optional 6th. On device: Home Screen with the Xavier widget added.

HOW TO CAPTURE 2–6 (ON YOUR IPHONE WITH BETA 50)

1. Enter a handful of real-ish expenses first (a week or two, across 2 accounts) so the Dashboard and lists look alive.
2. Open each screen and take a normal screenshot (Volume Up + Side button).
3. A Pro Max gives the 1290×2796 / 1320×2868 size Apple wants; any recent iPhone screenshot is accepted too.
4. Send the raws back and they can be captioned & framed into a matching set.

Headlines are drawn from the approved listing copy. Apple accepts plain screenshots, so shot 1 is already uploadable; framing is optional polish.
